

PRESS RELEASE

Embrach, 4 September 2019 – Diener AG Precision Machining and Diener Precision Pumps join the Acrotec Group.

The company Diener AG Precision Machining, which was set up in Zurich-Oerlikon by Oskar Diener in 1955 and then relocated to Embrach, is renowned as a metal-cutting specialist for medical technology and precision mechanics. The expertise and level of specialisation of Diener AG are focused exactly where customers make strict demands on manufacturing technology and require comprehensive services. Diener Precision Pumps, founded in 1994 with headquarters in Embrach and Lodi (USA), combines Swiss precision manufacturing and Californian engineering expertise. Diener Precision Pumps has produced top-quality precision pumps for more than 20 years. Whether it is gear pumps for the food industry or dosing pumps for dialysis, they are manufactured exactly according to the customers' specifications.

“We are very pleased that Messrs Rolf Diener and Douglas Robinson have decided that their company joins us. This transaction is aligned with Acrotec's strategy to create an independent provider specialised in the fields of micro-mechanics, micro-technology and medical technology. Both Diener companies are new flagships that have joined our organisation, and they will doubtless enable us to strengthen our position as subcontracting partner for our customers,” says François Billig, CEO of Acrotec.

Hence Diener AG Precision Machining and Diener Precision Pumps will be able to continue to promote growth, to innovate and to remain leaders in their sectors.

“We are pleased to be part of the largest Swiss supplier group for precision mechanics and micro-mechanics,” said Rolf Diener, CEO. When joining the Acrotec Group, the jobs and the Embrach production site will be retained, as will the development centre in the USA; moreover, all of the current management team will be retained. Our goal is to be able to offer our customers a partner with potential for further growth, thanks to Acrotec.

Diener Precision Pumps develops and markets high-precision piston and gear pumps worldwide. The R&D Department is located in Lodi, CA (USA), and production is carried out in Switzerland. The main fields of application are dialysis machines, analytic devices, inkjet printing, water treatment and high-end coffee machines. <https://www.dienerprecisionpumps.com/en/>

About the Acrotec Group:

Acrotec is an independent group that was founded by specialists from the watchmaking and micro-mechanics industry. Its main goal is to provide all watch manufacturers and brands with top-quality “Swiss-made” products. The Acrotec Group has more than six hundred employees. The Group’s strategic goal is to reduce the complexity of contract manufacturing by making available to its customers a broad range of watchmaking and industrial skills: turning, tuning and surface treatments, etc. The Group companies have expertise in development and production of finite elements for clockwork mechanisms (springs, dampers, flywheels, etc.) and components for medical devices. Acrotec also produces components for connectors, telecommunications, IT and mobile communications, automobiles, injection systems and micro-motors, as well as for the aerospace sector. <https://www.acrotec.ch/en/>
